

NYC RESTAURANT INSPECTIONS ANALYSIS

PRESENTATION BY ANDREA CABELLO

BUSINESS PROBLEM

Understanding, automating and improving the process of Inspections

ANALYSIS

What can we learn from this data?

DATA

Restaurant inspections in New York
City 2013 -2020

LEARNING MODEL

Reduce occurrence of Critical Flags

OVERVIEW

24 527

**TOTAL RESTAURANTS
INSPECTED**

117 697

TOTAL VIOLATIONS

recorded between 2013 and 2020.

4.8

**AVERAGE VIOLATIONS PER
RESTAURANT**

**11.2% OF RESTAURANTS ARE CHAIN
OWNED OR FRANCHISES.**

Top 10 Most Common Violations

10F: Non-food contact surface improperly constructed.

08A: Facility not vermin proof.

06D: Food contact surface not properly sanitized after each use.

10B: Plumbing not properly installed or maintained.

06C: Food not protected from potential source of contamination during storage, preparation, transportation, display or service.

04L: Evidence of mice or live mice present in facility

02G: Cold food item held above 41° F.

04N: Flies present in facility's food and/or non-food areas.

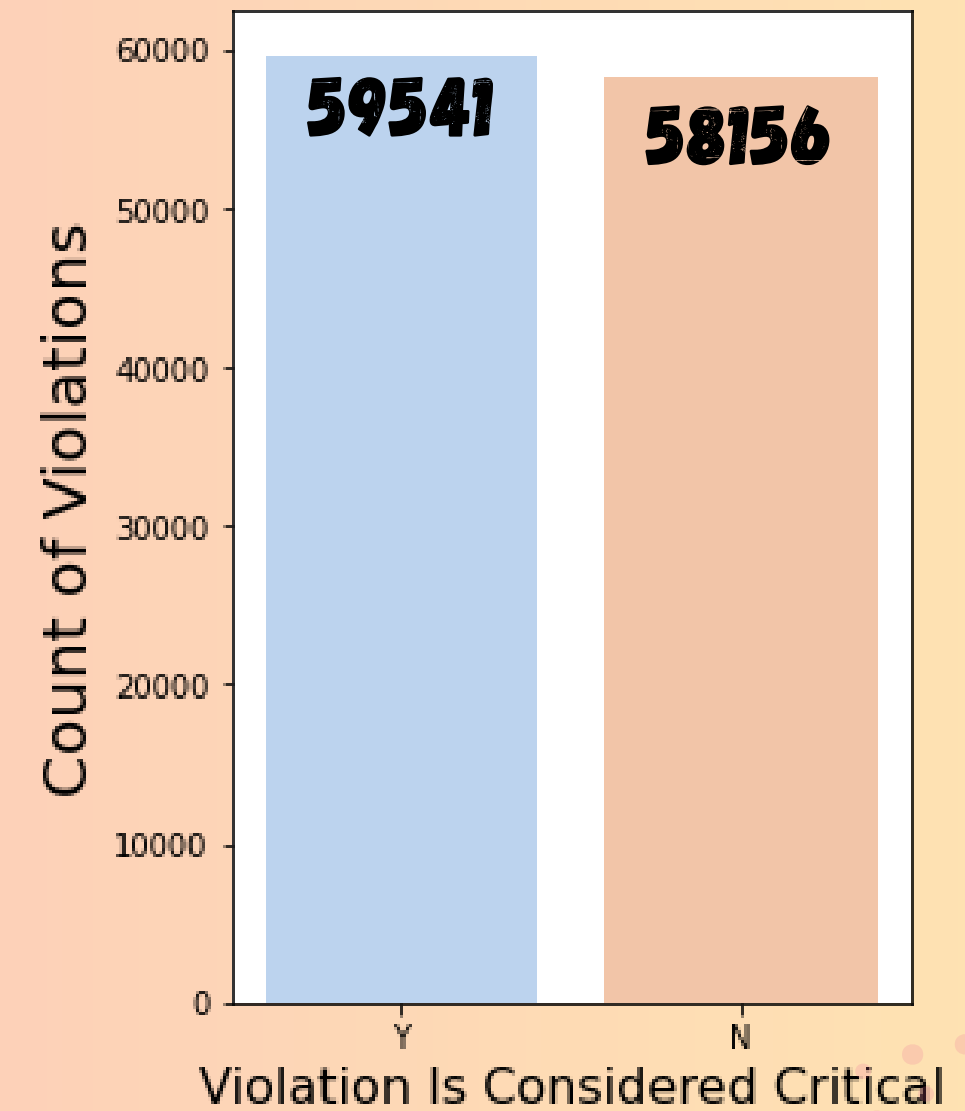

02B: Hot food item not held at or above 140° F.

09C: Food contact surface not properly maintained.

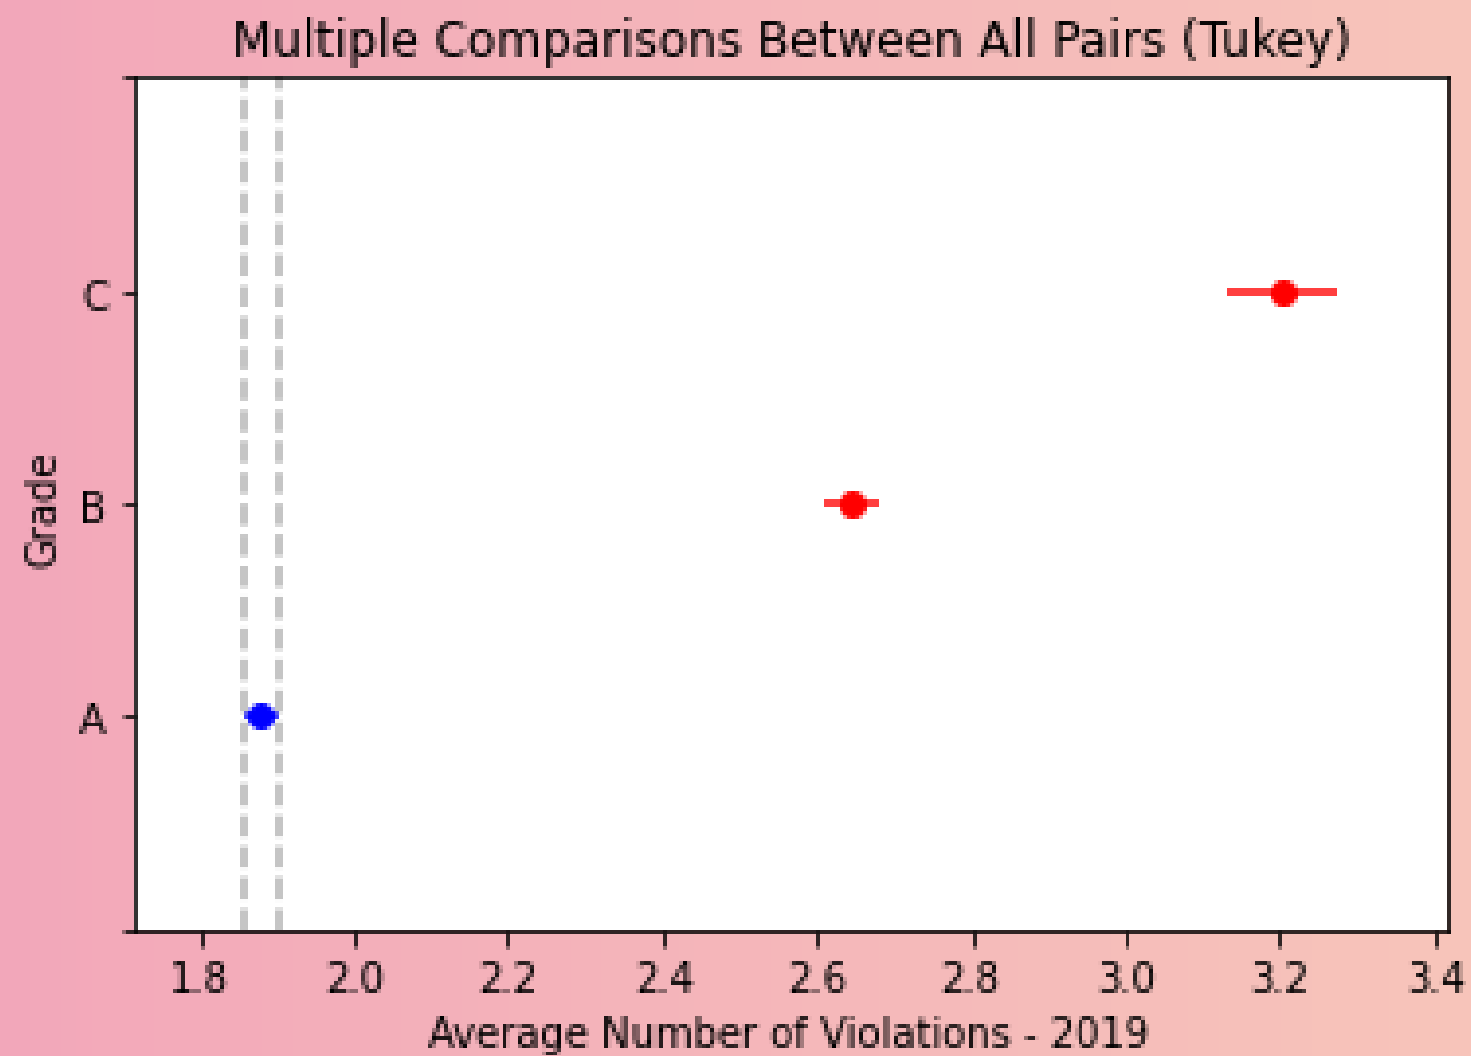

Top 10 Chain Establishments with Most Violations

CRITICAL FLAGS

ANALYSIS BY GRADE

COMPARING AVERAGE NUMBER OF VIOLATIONS BY THE GRADE A RESTAURANT HAD AT THE TIME OF INSPECTION.

COMPARING LEARNER MODEL RESULTS

COMPARING LEARNER MODEL RESULTS

80%

OF VIOLATIONS WERE LABELED
IN A WAY THAT HELPS
PROTECT NEW YORKERS.

CONCLUSIONS & FUTURE WORK

- In real life, it is very unlikely for an eatery to have no violations at all during service.
- The important thing is to differentiate which of these violations could cause eaters to get sick and address them.
- Based on the Inspection Type and Grade an establishment gets, we can predict the likelihood of Critical violations.
- Tuning our model: Reduce the current 22% False Negative rate.

Thank You!
